PROFESSIONAL SUMMARY

Backend Software Engineer with 2+ years of experience designing and delivering scalable REST APIs, enterprise web applications, and document management systems using Python, Django, and Laravel. Proven track record of leading full-cycle backend development – from system design and software architecture through to deployment – for production systems serving 300+ enterprise users and 2,500+ registered end-users. Skilled in PostgreSQL, Redis, Docker, AWS, JWT authentication, role-based access control (RBAC), object-oriented programming, and CI/CD pipeline configuration. Experienced in Agile delivery, cross-functional collaboration, and stakeholder requirement gathering in both corporate and autonomous sectors.

EXPERIENCE

Bangladesh India Friendship Power Company (P) Ltd · IT Engineer · Contract

Jun 2025 – Present

- Led backend development of Maitree (Django 5, Django REST Framework, Celery) – a 7-module enterprise resource platform covering Vendor Management, Gatepass, Material Gatepass, Guest House, Vehicle Booking, Complaint Tracking, and Shift Surveillance – serving 300+ users and cutting manual admin overhead by approximately 60%.
- Engineered end-to-end Procurement module with vendor onboarding, tender publication, and configurable multi-level approval workflows (3–5 stages) with automated email notifications, reducing procurement cycle time by approximately 40%.
- Designed and delivered E-Nothi 2.6 (Django 5, MS SQL Server) — an autonomous document-routing system with 4 parallel document types, two-stage approvals, cross-linking reference IDs, PDF/Excel export, and a CI/CD staging pipeline.
- Implemented JWT authentication, unit-based access control (UBAC), QR code check-ins, and automated PostgreSQL backups; wrote unit tests with pytest achieving over 80% coverage on core modules; provided ongoing technical support and troubleshooting for 300+ enterprise users post-deployment.

Barikoi Technologies Limited · Software Engineer — Backend

Feb 2025 – Jun 2025

- Built Laravel RESTful backend services with MySQL and Redis caching, reducing server load by 34% through query optimization and cache strategy across high-traffic API endpoints.
- Deployed and maintained Dockerized microservices on AWS EC2, reducing deployment time by approximately 40% through automated production workflows and container orchestration.

Phone Tech BD Ltd · Junior Backend Developer

Jan 2024 – Jan 2025

- Developed RESTful APIs with JWT authentication and role-based access control (RBAC) serving 5,000+ registered users across Android and web platforms.
- Integrated real-time push notifications via WebSockets and Pusher, reducing notification latency to under 500 ms – a 10x improvement over the prior polling-based approach.

PROJECTS

BanglaHealth 3.0 — NEHR Prototype | *Django 5, DRF, PostgreSQL 16, Redis, Celery, Next.js 14, Flutter 3.9, Docker, OpenAPI 3.0*

- Architected a full-stack national Electronic Health Record (EHR) platform applying rigorous system design and software architecture principles: modular Django REST backend, Next.js 14 physician portal, and a Flutter 3.9 Bengali-first patient mobile app with Riverpod state management, Hive offline caching, and a release APK.
- Implemented layered security (doctor MFA via BMDC + OTP, JWT access/refresh tokens, OTP-based patient consent, immutable audit logs, NID verification), 15+ versioned REST endpoints with OpenAPI 3.0 documentation via drf-spectacular, ICD-11 diagnosis autocomplete, drug interaction checker leveraging custom algorithm design for real-time look-up, and a Leaflet.js disease-surveillance heatmap.

BloodLagbe — Blood Donor Management System | *Django 5.2, SQLite, Bootstrap 5, AJAX*

- Built a no-login emergency donor coordination platform with real-time AJAX search by blood group and location, CSV bulk-import normalizing 8 + blood group variants including Bengali-script inputs, and complete SEO configuration (sitemap.xml, robots.txt).

TECHNICAL SKILLS

Languages: Python (advanced), PHP (intermediate), JavaScript, TypeScript, SQL, Dart

Frameworks & Libraries: Django, Django REST Framework (DRF), Laravel, Celery, Next.js 14, Flutter 3.9, Bootstrap 5

Databases: PostgreSQL, Microsoft SQL Server, MySQL, SQLite, Redis

DevOps & Cloud: Docker, AWS (EC2, S3), Nginx, Linux, Git, GitHub Actions, CI/CD pipelines

API & Security: RESTful API design, JWT authentication, OAuth 2.0, RBAC, OpenAPI 3.0, API versioning, rate limiting

Architecture & Design: Software architecture, system design, object-oriented programming (OOP), design patterns

Testing & Quality: pytest, PHPUnit, Playwright, unit testing, integration testing

EDUCATION

Khulna University · B.Sc. in Computer Science and Engineering

2018 – 2024

Thesis: Forecasting Power Consumption using FBProphet and XGBoost — predictive modeling for energy optimization in the power sector; domain knowledge directly applied at BIFPCL.
